

Obstetrical Tip Sheet for Hepatitis B Screening, Testing, and Management of Pregnant Persons

Screening with HBsAg* should be performed in each pregnancy, regardless of previous HBV* vaccination or previous negative HBsAg test results. Offer triple panel (HBsAg, anti-HBs, total anti-HBc*) screening to all pregnant persons ≥18 years of age who have not previously been screened with a triple panel.

	FIRST TRIMESTER 1-13 weeks	SECOND TRIMESTER 14-27 weeks	THIRD TRIMESTER ≥28weeks	DELIVERY AND POSTPARTUM
SCREENING AND TESTING	<ul style="list-style-type: none"> - Screen all pregnant persons for HBsAg at first prenatal visit. Screen with triple panel if not previously screened. -All positive HBsAg results during the pregnancy should be confirmed with a licensed HBsAg neutralizing test according to manufacturer labeling. - If HBsAg positive, check HBV DNA. 	<ul style="list-style-type: none"> - Screen for HBsAg those not previously screened during current pregnancy. See first trimester for specific details. - Check/recheck HBV DNA for all HBsAg positive persons not on anti-viral treatment at 26-28 weeks. 	<ul style="list-style-type: none"> - Screen for HBsAg those not previously screened during current pregnancy. See first trimester for specific details. - Check/recheck HBV DNA for all HBsAg positive persons not on anti-viral treatment at 26-28 weeks or if DNA not checked at/after 26 weeks. 	<ul style="list-style-type: none"> - Screen for HBsAg those not previously screened during current pregnancy. -Rescreen for HBsAg pregnant persons with clinical hepatitis or risk exposures† during pregnancy at the time of admission to the hospital or birthing facility for delivery.
MANAGEMENT	<ul style="list-style-type: none"> - After initial HBsAg screen is drawn for current pregnancy, initiate vaccine series with Engerix-B, Recombivax-HB or Twinrix§ for those who have not previously been vaccinated. - Report HBsAg positives to Perinatal Hepatitis B Coordinator and refer to specialty care. 	<ul style="list-style-type: none"> - After initial HBsAg screen is drawn for current pregnancy, initiate vaccine series if needed. See first trimester for specific details. -Report HBsAg positives to Perinatal Hepatitis B Coordinator and refer to specialty care. 	<ul style="list-style-type: none"> - After initial HBsAg screen is drawn for current pregnancy, initiate vaccine series if needed. See first trimester for specific details. - Report HBsAg positives to Perinatal Hepatitis B Coordinator and refer to specialty care. - If HBV DNA is ≥ 200,000 IU/mL, treat at 28-32 weeks until birth. 	<ul style="list-style-type: none"> - Post-exposure prophylaxis¶ for infants born to HBsAg positive pregnant people and for infants weighing less than 2,000 grams born to pregnant people with unknown HBsAg status. -Initiate mother’s vaccine series if needed. See first trimester for specific details. - Breastfeeding does not increase the risk of HBV transmission to infants. - Report HBsAg positives to Perinatal Hepatitis B Coordinator and refer to specialty care.

*Abbreviations: HBsAg=hepatitis B (HepB) surface antigen; HBV= HepB virus; anti-HBsAg= antibody to HepB surface antigen; total anti-HBc= total antibody to HepB core antigen

† Recent or current injection-drug use, more than one sex partner in the previous 6 months, HBsAg-positive sex partner, or evaluated or treated for a sexually transmitted infection

§Heplisav and Prehevbrio are not recommended during pregnancy due to lack of safety data; Twinrix is a combination hepatitis A/hepatitis B vaccine that can be given during pregnancy when indicated(<https://www.cdc.gov/vaccines/schedules/hcp/imz/adult.html>)

¶Post-exposure prophylaxis: administer HepB immunoglobulin and HepB vaccine to the infant within 12 hours of birth and notify infant’s Health Care Provider to f/u for timely vaccination and post vaccination serologic testing
